

CURRENT CHALLENGES - AGENTIC AI 2025

LLM CORE

- **Epistemic Humility**
Gemini 3 Flash: 91% hallucination when unsure, doesn't say "I don't know"
- **Causal Reasoning**
Deficit in complex logic and multi-step causal chains
- **Metacognition**
Inability to evaluate its own uncertainty and calibration
- **Static Knowledge**
Model frozen in time. RAG does not equal native knowledge
- **Non-Determinism**
Unpredictable outputs hinder testing and quality guarantees

SYSTEM

- **Legacy Integration**
40%+ projects fail due to legacy systems without modern APIs (Gartner)
- **Multi-Agent Coordination**
Orchestration, conflicts and coordination failures between agents
- **Memory and Context**
Limited persistence and state loss in long-running tasks
- **Data Architecture**
48% report issues with data discovery and reuse (Deloitte)
- **Scale Infrastructure**
Massive concurrency, latency <2s, async tasks with immediate response

GOVERNANCE

- **Security and Attacks**
Prompt injection, expanded attack surface in multi-agents
- **Trust and Transparency**
Explainability of autonomous decisions and traceability
- **Accountability**
Who is responsible when an autonomous agent fails?
- **Regulation and Compliance**
EU AI Act, data privacy and insufficient legal frameworks
- **ROI and Business Value**
80% companies without impact on results (McKinsey 2025)
